Pune, India

Java FullStack Developer with 3 years of experience building scalable, secure, high-performance systems for enterprise clients such as Zendesk and IBM. Deep expertise in Java, Spring Boot, Spring Security, Spring Data JPA/Hibernate, and REST API design, with a proven track record of cutting API response times by 30—35%, resolving 100% of Sev-2/3 security vulnerabilities within SLA, and shipping production-grade features used by 1,000+ enterprise users. Seeking to contribute to Zensar as a Java Full Stack Developer, leveraging ReactJS + TypeScript, Redux Toolkit, and microservices-oriented backend development. AWS Certified Cloud Practitioner.

CERTIFICATION

- AWS Certified Cloud Practitioner (Valid upto January 2027)

WORK EXPERIENCE

Java Full Stack Developer-Persistent Systems LTD

Mar 2026 - Present

- **Reduced Sev-2/3 vulnerability backlog to zero** by resolving all critical and major security issues within SLA, achieving **100% on-time compliance** across every sprint cycle.
- Scaled a SaaS dashboard to **1,000+ enterprise users** by building and maintaining a ReactJS + TypeScript SPA using **Redux Toolkit** for global state and delivering responsive, cross-browser compatible experiences.
- Accelerated UI performance by refactoring state management logic and navigation flows, measurably improving load times and user responsiveness on key dashboard views.
- Improved code review velocity by standardizing Git branching workflows and PR practices on **GitHub**, contributing to faster review cycles and higher team-wide code quality.
- Resolved Sev-2 and Sev-3 security vulnerabilities within Service Level Agreement (SLA), maintaining **100% on-time resolution compliance**.
- Built responsive, cross-browser compatible single-page applications (SPAs) using **ReactJS and TypeScript**, ensuring optimal user experiences across various platforms.
- Managed global state using **Redux Toolkit** to streamline application performance and usability.
- Utilized **Git and GitHub** for version control to facilitate code reviews and collaborative development.

Java Full Stack Developer-Persistent Systems LTD

Sep 2023 - Feb 2026

- **Cut API response times by 30—35%** by optimizing JPA/Hibernate queries and eliminating N+1 patterns, introducing efficient fetch strategies across core ticket management endpoints.
- Designed and shipped **REST APIs** at scale by building and maintaining **Spring Boot** services for customer ticket management and user-related features, supporting high-volume production traffic.
- Improved API contract stability by implementing **DTO mapping layers** to fully decouple API contracts from persistence models, reducing breaking-change risk across service upgrades.
- Enhanced system reliability by introducing structured error handling and logging standards across backend services, reducing **mean-time-to-debug** for production incidents.
- Collaborated cross-functionally with frontend engineers to integrate ReactJS UIs with backend services, enabling **real-time ticket updates** for end users.
- Participated in architectural roadmap discussions around scalability, fault tolerance, and security, contributing to designs

supporting high-volume traffic.

- Optimized database interactions using JPA/Hibernate, reducing average API response time by **30—35%**.
- Implemented DTOs and mapping layers to ensure separation of API contracts from persistence models.
- Handled error handling and logging in backend services to improve reliability and debugging.
- Collaborated with the frontend team to connect ReactJS applications with backend services for real-time ticket updates to users.

Internship Trainee-Persistent Systems LTD

Jan 2023 - Aug 2023

- Completed an internship at Persistent Systems LTD.

PROJECTS

Event Management Platform

- Developed a full-stack event booking system with user authentication.
- Implemented backend services for booking, payments, and event management using **Spring Boot** and **REST APIs**.
- Designed relational database schemas in **PostgreSQL** to handle event and user data efficiently.
- Integrated the frontend with the backend using **ReactJS**, providing a seamless UI for event search and booking.

SaaS Platform

- Developed and maintained a ReactJS-based SaaS dashboard actively used by **1,000+ internal enterprise users**.
- Resolved Sev-2 and Sev-3 security vulnerabilities within SLA, achieving **100% on-time resolution compliance**.
- Built responsive, cross-browser compatible single-page applications (SPAs) using **ReactJS** and **TypeScript**, and managed global state using **Redux Toolkit**.
- Refactored and optimized state management logic, improving application responsiveness and user navigation flows.
- Used **Git** and **GitHub** for version control, code reviews, and collaborative development, contributing to faster review cycles and higher code quality.

CRM Platform

- Optimized database interactions with **JPA/Hibernate**, achieving a significant reduction in average API response time by **30—35%**.
- Implemented **DTOs** and mapping layers to ensure separation of API contracts from persistence models.
- Enhanced system reliability by managing error handling and logging in backend services for improved debugging.
- Collaborated closely with the frontend team to integrate **ReactJS** applications with backend services, delivering **real-time ticket updates** to users.
- Participated in architectural discussions centering around **scalability**, **fault tolerance**, and **security**, contributing to designs supporting high-volume traffic.

EDUCATION

B.Tech / B.E. | Information Technology

2023

The Yeshwantrao Chavan College of Engineering, Nagpur

Grade - 8.32/10
